

VIDEO COLLABORATION FOR REMOTE TEAMS

Meet Star Collaboration Incorporated.

With an implemented video strategy for a completely remote-based team, Star Collaboration chooses Logitech solutions to:

Enrich cloud-based collaboration platforms

Boost collaboration and productivity

Secure better user experiences

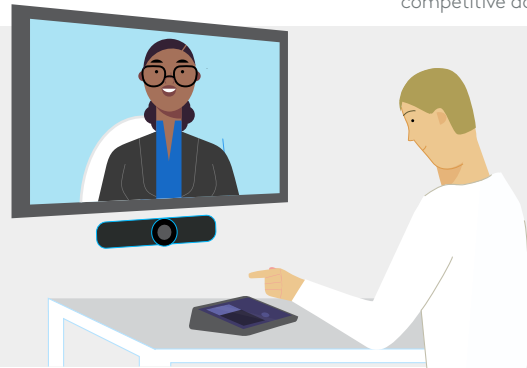

Create a culture of employee engagement

Adopt technology to gain/sustain a competitive advantage

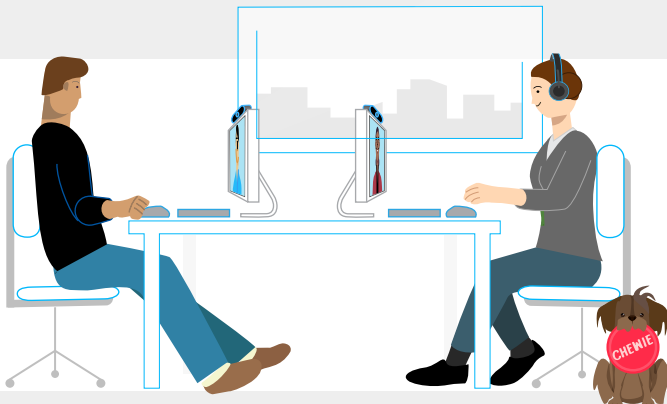

Luke, the CEO

With the need to make decisions fast, Luke's calendar is filled with meetings and he needs a solution that just works for the force of his busy day. Using one-touch join for meetings on the Logitech Small Tap Room Solution, Luke is able to connect, engage and align with meeting participants to get stuff done—all from the comfort of his home office.

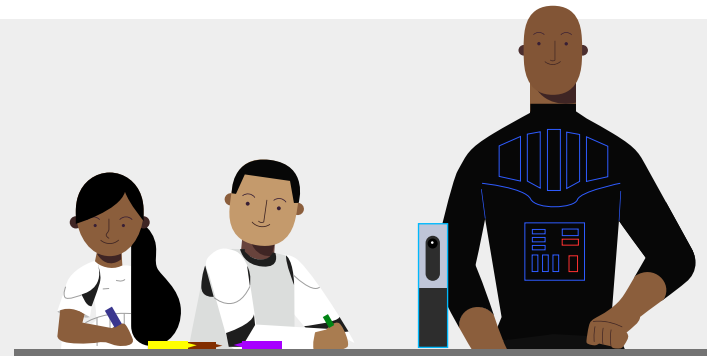

Leia, the Marketing Director

Sharing a workspace with her husband Han, Leia relies on her Logitech solutions to keep her engaged and focused. Leia is able to clearly deliver messages with her Logitech Zone Wireless headset's advanced noise canceling microphone, and with the Logitech Brio webcam's RightLight technology, Leia knows she will look professional in any lighting condition.

Darth, the Sales Executive

Darth is a relationship builder and never wants to miss a call. He trusts the Logitech Connect conference camera for its all-in-one design and premium camera lens. When Darth's kids start a rebellion, he appreciates the Connect's compact and mobile design, allowing him to take it anywhere in his home for calls and meetings.

Rey, the Financial Director

Having a semi-private workspace at home, Rey uses the Logitech BCC950 all-in-one conference camera for its ease of use and compact footprint. With the BCC950's HD video and audio, Rey is able to confidently present and adjust to her audience based on visual cues from other team members.
